Summary

Computer Science Engineering student building Java, Python, TypeScript and SQL microservices, RESTful APIs and React GUIs. Shipped 3 full-stack projects with CI/CD pipelines, automated unit testing, JWT/OAuth security and blockchain-backed audit trails.

Education

Sardar Patel Institute of Technology Mumbai, MH

Bachelor of Technology in Computer Science and Engineering – GPA: 7.04 / 10.00 *Expected May 2027*

- **Relevant Coursework:** Data Structures & Algorithms, OOP (Java), DBMS (SQL), Operating Systems, Computer Networks, Software Engineering

Project Experience

ApnaGhar – Blockchain Real-Estate Platform | *React, TypeScript, Django, PostgreSQL, Hyperledger* 2025

- Shipped 25 features on a React 18 + TypeScript GUI and Django REST Framework server with PostgreSQL, JWT/Google OAuth and Razorpay payments.
- Integrated Hyperledger Fabric 2.5 smart contracts with 8 verification methods and SHA-256 hashing on IPFS for immutable property audit trails.
- Engineered a 24/7 RAG chatbot over property and legal documents using vector embeddings, with context-filtering guardrails for accurate answers.
- Enforced role-based access control on uploads; deployed via Docker Compose, Vercel and Render.

F1 Fantasy Platform – Cloud-Native Microservices | *AWS, Terraform, Jenkins, Docker, Node.js, React* 2025

- Provisioned AWS infrastructure (EC2, S3) as code with Terraform to host a Node.js microservice and React GUI.
- Containerized the frontend and backend with Docker on EC2, binding an Elastic IP for a stable public endpoint across restarts.
- Built a Jenkins CI/CD pipeline with Docker and GitHub webhooks, running unit tests on every commit for zero-downtime releases.
- Load-tested with 10+ concurrent users, profiling multi-threaded request handling to find and fix race conditions and memory leaks.

MLCloudScheduler – Adaptive Cloud Scheduling | *PyTorch, Scikit-learn, Django, React* 2025 – 26

- Forecast CPU, memory and network I/O with a multi-resource LSTM (R^2 0.929 vs 0.562 for ARIMA).
- Cut overload events by 39–62% versus threshold autoscaling across 3 workload patterns and 20 experiments.
- Flagged anomalies (5% of timesteps) with Isolation Forest, lowering scaling thresholds by 10 points before overloads hit.
- Exposed 8 REST endpoints in Django with a React 19 + Chart.js dashboard; containerized with Docker Compose in a 3-member team.

Leadership

Oculus, Sardar Patel Institute of Technology Mumbai, MH

Head of Operations *2024 – 2025*

- Led the operations team across 3 workstreams, enforcing milestones and delivery standards under tight deadlines.
- Coordinated external vendors and campus stakeholders, resolving on-site issues within same-day deadlines.

Certifications

Industry Simulations: JPMorganChase Investment Banking Job Simulation (2026); Goldman Sachs Risk Management Job Simulation (2026)
Communication: Trinity College London – Grade 5, Performing Text, with Merit (2019)

Technical Skills

Languages: Java, Python, SQL, TypeScript, JavaScript, C++
Backend & Web: Microservices, RESTful APIs, Django REST, Node.js, React, Next.js, Multi-threading
Databases & Cloud: PostgreSQL, MySQL, MongoDB, AWS (EC2, S3), Docker, Terraform, Jenkins CI/CD, Git
Practices & ML: Unit Testing, Code Reviews, Secure Coding, OOP, DSA, PyTorch, LSTM, RAG
